

# Power Pole Upgrade Kit for 257477BA

Copyright Brooke Clarke 2014

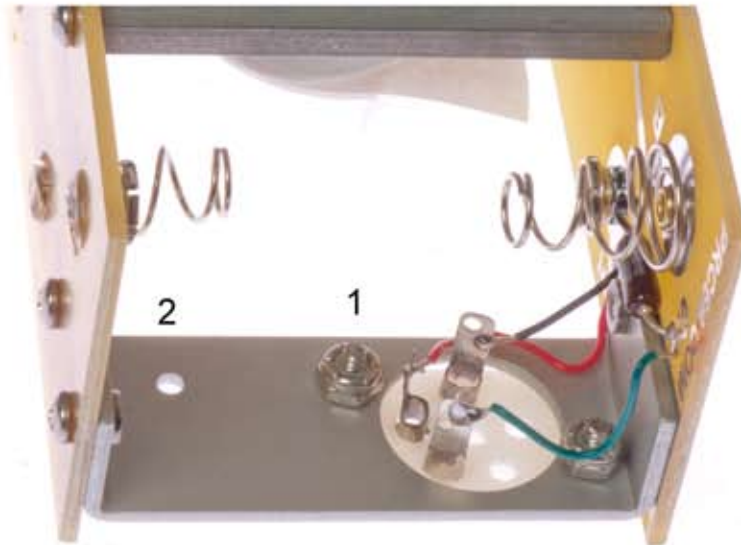

## Contents

- 1 preassembled Power Pole Connector with wires
- 2 each 6-32 x 3/4" Philips head screws
- 1 each 6-32 Nylon lock nut

## Directions

1. Remove screw and nut close to the center of bracket and save the nut.

2. Install the Power Pole assembly with the black connector nearest the socket using the two 3/4" screws in holes 1 & 2, and one new and one old lock nut. It's important that the nut (1) that also holds the socket is not snugged down, but instead is backed off a little (about 1/3 turn) so that the socket and easily move.

3. Solder the red wire to the socket terminal that already has a red wire.

Solder the black wire to the socket terminal that already has a black wire.
